## QUALITY MAKES A DIFFERENCE

We are dedicated to providing the highest quality material. All of our steel is subject to strict quality control which means that our customers can depend on their investment for years.

- 40 year warranty on paint film integrity
- Reflects a minimum of 25% of the sun's rays
- Superior resistance to chalking and fading
- Creates cooler interiors (1% of reflected sunlight translates into a 1° reduction in heat allowed into the structure)
- Easy installation in the heat of the day
- Helps to prevent oil canning
- Rebates may be available from the Federal government or local energy companies

Steel and paint sources may vary, but all warrantied material utilizes cool paint technology.

- 1. ASTM A792/A792M-08, Grade "E" 80,000 psi steel.
- 2. Zinc/Aluminum *or* G60 Zinc coating Clear resin coating added on all bare products.
- 3. Pre-treated film provides superior adhesion of the primer.
- 4. Urethane primer provides additional corrosion protection as well as ensuring permanent bonding of the finish coat.
- 5. Siliconized polyester finish coat adds fade-resistant color and long-lasting protection.

\*Trapped moisture in the stacks of painted material may cause delamination of the painted surface or hasten deterioration of the painted finish. If panels arrive wet or become wet at the jobsite, open the bundle and allow them to dry completely.
